FUNCTION: ENDOEDXYRIBONUCLEASE I, WHICH IS EXPRESSED IN THE BREAKDON STAGE, IS NECESSARY FOR TO GENETIC RECONBINATION AND THE BREAKDON OF HOST ONA. IN THE EARLY STAGE OF INFECTION, TO ONA REPLICATES VIA A LINEAR NONOMER. IN THE LATE STAGE, THE TO ONA REPLICATES VIA LINEAR CONCATEMERS SEVERAL GENOMES IN LENGTH. THE GENE 3 PRODUCT HAS ALSO BEEN IMPLICATED IN THE MATURATION OF THESE CONCATEMERS.

CATALYTIC ACTIVITY: Endomncledlytic cleavage to 5'-

ASBAI K., Tadd T., Yamamoto M., Tada A., Mizuno M., Eimoto T., Kato T.
Submitted (SEP-1998) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: CADHERINS ARE CALCIUM DEPENDENT CELL ADHESION PROTEINS.
THEY PREFERENTIALLY INTERACT WITN THEMSELVES IN A HUMOPHILLO
MANNER IN CONNECTING CELLS; CADHERINS MAY THUS CONTRIBUTE TO THE
SORTING DE HETEROCENBOUS CELL TYPES. N-CADHERIN MAY BE INVOLVED I
NEURONAL RECOGNITION MECHANISM.
-!- SUBCELLULAR LOCATION: Type I membrane protein (By similarity).
-!- TISSUE SPECIFICITY: IN TESTIS, EXPRESSED IN SERTOLI AND GERM
                                                                                                                                                                                                                                                                                                                                                                            DOMAIN

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  BB

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19P2 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central narvous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative sequences AAV49290-302 represent peptide fragments of the 19P2 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19p2 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunosassy can also be applied in clarifying the physiological functions of the ligand and its derivative sequences AAY49290-302 represent peptide fragments of the 19p2 ligand.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         믕
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SX
                        This sequence represents a peptide fragment from a novel human type caliform polypeptide corresponding to amino acid residues 34 to 53 of the sequence represented in AAW31390 and is used in an assay to monitor ligand binding to the G protein-coupied receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator, a central nervous system modulator or a pancreatic function compositions containing this ligand may be used as a pituitary function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, composition, prophylactic application, prophylactic application, prophylactinaemia, hyperchoiesterolaemia, hypergiyceridaemia, hyperchoiesterolaemia, hypergiyceridaemia, hyperpolactinaemia, diabetes, cancer, pancreatitis, renal disease, hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, hyperprolactinaemia, neurosis, asthma, rheumatoid arthritis spinal injury, translent brain ischaemia, epilepsy, amylotrophic lateral scierosis, acute myocardial infarction, infertility, spinocerebellar degeneration, colapsable of altering the binding activity of the ligand affecting activity of the ligand aff
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Best Loc

                                                      The present sequence represents a human type ligand fragment. It

CL is used in the course of the invention. The specification describes

CL an agent for modulating prolactin secretion which comprises a

CL ligand polypeptide or a sait, for a G protein-coupled receptor (GPCR)

CL treating or preventing hypocovarianism, genecyst cacogenesia, menopausal

CL syndrome, suchyroid or hypometaboliam. They can by used for promoting

CL inhibiting prolactin secretion can be used for promoting

CL inhibiting prolactin secretion can be used for treating or preventing

CL inhibiting prolactin secretion can be used for treating or preventing

CL prolactinoma, infertility, impotence, amenorihea, galactorihea,

CL prolactinoma, infertility, impotence, amenorihea, galactorihea,

CL cromegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome.

CL proles-Albright ayndrome, lymphoma, Sheelan syndrome or dyszocapermia.

CL proles-Albright ayndrome, lymphoma, Sheelan syndrome or dyszocapermia.

CL prolacting placental function can be used for treating or preventing

CL choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Beat Local
                                                                                            This Invention describes a novel oxytocin accretion-regulating agent which contains a ligand peptide or its asit for the 6 protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin accretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, atoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a human peptide which acts as an oxytocin secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; oxytocln secretion promoter: G protein-coupled receptor protein: treatment: disease; pain; atonic bleeding: uterine recovery failure; co caesarean section: artificial fertilization; galactostasia: goat: pig;
                                                                                                                                                                                                                                                  Physiologically-active polypeptide recognized as ligand by G protein-coupled receptor protein, for promoting aecretion of oxytocin, as drugs for diaeaaes relating to oxytocin secretion and in veterinary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human oxytocin secretion promoting peptide

The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism, and pancreatic function regulatory mechanism, the antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative. Sequences AAY49290-302 represent peptide fragments of the 19P2 ligand.
Human; corticotrophin releasing hormone; CRH; G protein receptor analgesic; hyperaldosteronism; hypercortisoiaemia; hypoadrenocort Addison's disease; adrenal gland hyperfunction; obesity.

This can be used to control the secretion of CRH and is useful as an analgesic or for treating, preventing or smellorating diseases associated with CRH secretion such as hyperaldosteronism, hypercortisolaemia, secondary or chronic hypedarencorticism, Addison's disease (including boredom, nausea, pigmentation, hypogonadism, hair loss, and hypotension), adrenal gland hypofunction and obesity. The present sequence is a peptide used in the exemplification of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  용
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention deacribes a modified therapeutic peptide (I) comprising a therapeutically active amino acid region (III) and a cractive group (II) (e.g. succinimidy) and maleimido groups) attached to a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a peptidase atabiliaed therapeutic peptides e.g. hormones, growth (I) are useful for modifying therapeutic peptides e.g. hormones, growth factors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not auitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body. Modifying and attaching therapeutic peptides to aibumin prevents or reduces the action of peptidases to increase length of activity (haif iffe) and apecificity as bonding to large molecules decreases chaseogle to AAB90829 to AAB92441 represent peptides which can be used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention describes a novel oxytocin secretion-regulating agent which contains a ligand paptide or its sait for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarrean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a human peptide which acts as an oxytocin secretion
useful as an analgesic or for treating, preventing or ameliorating diseases associated with CRH secretion such as hyperaldosteronism, hypercortisolaemia, secondary or chronic hypoadrenocorticism, Addison's disease (including boredom, nausea, pigmentation, hypogonadism, hair ioss, and hypotension), adrenal gland hypofunction and obesity. The
                                                           The present sequence describes a method of controlling the secretion coorticotrophin releasing hormone (CRH), involving the use of a G prote receptor ligand. This can be used to control the secretion of CRH and useful as an analgesic or for treating, preventing or amellorating
                                                                                                                                      Disclosure; Page 75; 90pp; Japanese

                   This sequence represents a peptide fragment from a novel human type ligand polypeptide corresponding to amino acid residues 34 to 55 of the sequence represented in ANW31390 and is used in an assay to monitor ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator. A central nervous system modulator or a pancreatic function modulator. This ligand could have specific applications as a prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consclousness, anxiety syndrome, schizophrenia, trauma, growth hormone secretory disease, hyper- and polyphagia, hyperprolactinaemia, hypercholesterolaemia, hyperglyceridaemia, hypercholesterolaemia, hyperglyceridaemia, province, neurosis, astima, rheumatold arthritis, spinal injury, transient brain ischaemia, epilepsy, amylotrophic lateral sclerosis, acute myocardiai infarction, infertiiity, spinocerebellar degeneration, bone fracture, trauma, atopic dermatitis, osteoporosis and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                     This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a human peptide which acts as an oxytocin secretion
                                                                                                                                                                                                                        Physiologically-active polypeptide recognized as ligand by G protein-coupled receptor protein, for promoting secretion of oxytocin, as drugs for diseases relating to oxytocin secretion and in veterinary
                                                                                                                                                                                                                                                               WPI;
                                                                                                                                                                                                                                                                                                                                                                                          Homo

This can be used to control the secretion of CRH and is useful as an analyseic or for treating, preventing or ameliorating diseases associated with CRH secretion auch as hyperaldosteronism, hypercortisolaemia, secondary or chronic hypoadrenocorticism, Addison's hipercortisolaemia, secondary or chronic hypoadrenocorticism, Addison's disease (including boredom, nausea, pigmentation, hypogonadism, hair loss, and hypotension), adrenal gland hypofunction and obesity. The present sequence is a peptide used in the exemplification of the

                                                                                                                   S
                                                                                                                                                                                                                                                                        This sequence represents a poptide fragment from a novel human type CC ligand polypeptide corresponding to amino acid residues 23 to 53 of the certain polypeptide corresponding to amino acid residues 23 to 53 of the CC sequence represented in AAX31390 and is used in an assay to monitor CC indicated binding to the G protein roupled receptor protein. Pharmaceutical compositions containing this iigand may be used as a pituitary function CC modulator, a central nervous system modulator or a pancreatic function composition, a central nervous system modulator or a pancreatic function modilator. This iigand could have specific applications as a composition, and is the protein system modulator or a pancreatic function composition, interpretable syndrome, schizophrenia, composition, growth hormone secretory disease, naxiety syndrome, schizophrenia, composition, growth hormone secretory disease, hyper-and polyphagia, composition of hyperinjedemia, hyperchoiesterolaemia, hypergiveridaemia, fully for the pancreatitis, renai disease, compositent brain ischaemia, epiiepsy, amylotrophic lateral scierosis, context myocardial infarction, infertiiity, spinocerebeliar degeneration, considered by the screen compounds which are capable of altering the binding activity of the ligand affecting activation of the C protein-coupled receptor protein.

Sequence 47, Application US/0942I208 Patent No. 6258561 GENERAL INFORMATION: APPLICANT: Suenaga, Masato
APPLICANT: MOTIYA, Takeo
APPLICANT: Tanaka, Yoko
APPLICANT: NIShimura, Osamu
TITLE OF INVENTION: METHOD OF PRODUCING A 19P2 LIGAND
NUMBER OF SEQUENCES: 52 CORRESPONDENCE ADDRESS: DIKE, BRONSTEIN, ROBERTS & CUSHMAN, LLP

ZIP: 02109
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.30 Boston 130 Water Street USA

FILING DATE:
PRIOR APPLICATION DATA:
APPLICATION UNGBER: US 09/I05,678
APPLICATION UNGBER: JP 172118/1997
ETILING DATE: 27-JUN-1997

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DB
